

## Dual 4-channel CMOS Analog Multiplexer

### General Description

The ET48752 is a CMOS analog multiplexer which consists of two 4-channel multiplexers. It operates from 2.5V to 5.5V single power supply and all digital inputs support 1.8V logic control.

The ET48752 features low voltage, low on-resistance and low off-leakage current. The high performances make it very suitable for multiple applications, such as cellular phones, audio and video signal routing, etc.

The ET48752 is available in Green TSSOP16 and TQFN16L packages. It operates over an ambient temperature range of -40°C to +85°C.
